

Please be advised that Curtiss Wright has acquired VMETRO and its subsidiaries (including VSYSTEMS, Micro Memory and 3D Radar). This takes effect immediately. VMETRO will be integrated within the division of Curtiss Wright Controls Embedded Computing (CWCEC), with headquarters in Leesburg, VA, USA.

It was clear from the start that VMETRO's strong market presence and focus on embedded markets would enhance CWCEC's leadership position. We have similar customers, partners and our technology choices will allow us to continue to set the standard in our markets.

We believe our combined companies will also allow us to offer you a broader spectrum of solutions that will meet your current needs and future project requirements. We also are confident in our ability to offer you a more powerful suite of advanced technology choices that will ensure your strong competitive position in your market.

In closing the new CWCEC team will work hard to earn your support and business and we will strive to meet and exceed your expectations.

Best Regards,

Tom Quinly
President
Curtiss-Wright Controls Inc.
